

# Marbosan-100

Marboploxacin 10% injection

*Treatment of respiratory infections, acute mastitis  
caused by Gram-negative bacteria in cattle and  
Metritis Mastitis Agalactia syndrome in pigs.*

# Marbosan-100

Solution for parenteral administration

**Marbofloxacin is a synthetic, bactericidal antimicrobial, belonging to the fluoroquinolone group which acts by inhibition of DNA gyrase. It has a broad-spectrum activity in vitro against Gram-negative (*Pasteurella multocida*, *Mannheimia haemolytica*, *Histophilus somni*, *E. coli*) and against Gram-positive bacteria (in particular *Staphylococcus*). Resistance to *Streptococcus* may occur.**

## CONTAINS PER ML

Marbofloxacin ..... 100 mg.

## INDICATIONS

Cattle:

Treatment of respiratory infections caused by sensitive strains of *Pasteurella multocida*, *Mannheimia haemolytica*, *Histophilus somni* and *Mycoplasma bovis*. It is also indicated for the treatment of acute mastitis caused by Gram-negative bacteria susceptible to marbofloxacin.

Pigs:

Treatment of Metritis Mastitis Agalactia syndrome (postpartum dysgalactiae syndrome, PDS) caused by marbofloxacin-sensitive bacterial strain.

## DOSAGE

Cattle:

2 mg of marbofloxacin/kg body weight (corresponding to 1 ml Marbosan-100 per 50 kg body weight) as a subcutaneous or an intramuscular injection once daily for 3 - 5 days.

The treatment for acute mastitis is 3 days intramuscularly. The first injection may be administered intravenously.

Pigs:

2 mg of marbofloxacin/kg body weight (corresponding to 1 ml Marbosan-100 per 50 kg body weight) once daily by intramuscular injection for 3 days.

## WITHDRAWAL TIMES

Cattle:

- Meat and offal : 6 days.
- Milk (3-5 days treatment): 36 hours.

Pigs:

- Meat and offal: 4 days.

## PACKAGING

Vial of 100 ml.
